

# MONOAIR™ Cushion Technology

Soft-fruit containers  
that no longer need  
bubble padding

Our new 100% mono-material protective soft-fruit punnet no longer needs bubble padding thanks to its revolutionary MONOAIR™ cushion technology.

Traditionally, punnet bases have required an additional layer of bubble padding attached with a glue adhesive to protect soft fruit from bruising and spoiling in transit. However, the padding must be removed from the container to be properly recycled.

The MONOAIR™ cushion base eliminates the need for a separate bubble pad, which reduces plastic content and conserves resources without compromising on our high standards of product protection and quality.

MONOAIR™ cushion technology makes life easier for consumers, who can now simply throw the whole punnet into their recycling bin without having to worry about separating the bubble padding first. That gives them peace of mind knowing that not only is there less plastic in the punnet, but that the whole container can be recycled back into food grade packaging rPET.

WE37

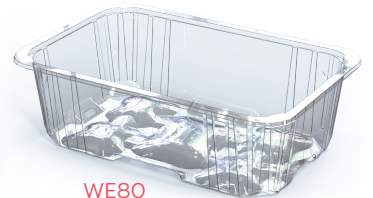

Option to make with up to  
100% recycled PET (rPET)

Fully recyclable back  
into food grade rPET
